K-SOL 9-50-9 + ME

PROMOTES RHIZOGENESIS
IMPROVES FLOWERING

The K-SOL LINE consists of a wide range of highly soluble fertilizers with a large variety of macronutrients ratios, to best meet individual crop requirements and production expectations. The microelements, present in a totally chelated form, help prevent and treat any physiological plant disorder associated to their deficiency. The K-SOL LINE is suitable for any fertigation system.
K-SOL 9-50-9 + ME is the the fertilizer of the K-SOL LINE characterized by a high phosphorus content. It is recommended for fruit crops at vegetative restart, to stimulate the growth of new roots and for horticultural crops at post-sowing/transplanting, to promote rhizogenesis. For all crops, applications during pre-flowering and flowering improve flowering and fruit set.
